SPAL's new range of advanced brushless technology water coolant pumps were on display and attracting attention from visitors to the Motorsport Industry Association's Motorsport Engineering & Technology Show, earlier this month.

Coupled with SPAL's world beating high-performance axial fans, the coolant pumps introduce even more efficiency to the thermal management system in a range of applications from electric to hydrogen powered heavy duty vehicles.

Pawel Cierniak commented: "It was great be at the show among other high-profile exhibitors, make some new engineering contacts as well as catch up with some of our customers and see some interesting machines which already have SPAL on board."

Aftermarket

James Bowett has been taking a look behind the scenes at aftermarket customer Motaclan to find out more about its operation supplying classic car parts for the likes of Mini, TVR, MG Rover, Austin Healey, Triumph and Morris.

Not surprisingly a SPAL fan is the No. 1 engine cooling choice for the iconic TVR as the part was fitted to the original vehicles when they were in production from 1990 to 2006.

SPAL also aligns with Motaclan's mission to supply only the best quality parts, strongly believing in the mantra 'buy quality fit once'.
