

FOR COOLING OUT LOUD

Making the Electrification Connection at MIA EEMS

Making the Electrification Connection at MIA EEMS

SPAL is gearing up for the rescheduled Energy Efficient Motorsport Conference to present a technology showcase dedicated to electrification.

Although SPAL has limited exposure in the F1 sector, the real reason to attend is that whatever innovations and advancements happen in motorsport, eventually filter down into general automotive.

SPAL has a lot of experience cooling battery, hybrid and hydrogen systems both fuel cell and fuel and the event, hosted by Motorsport Industry Association (MIA) provides the perfect conduit for a two-way information exchange that will get us in front of the right people.

Another exciting sector for SPAL is the thermal management of charging points with our highly efficient fans delivering the airflow essential to keep the electronics cool.

This is especially true of the rapid charging points where the energy transfer from the charging station to the vehicle, particularly in 2nd generation cars, generates enormous heat to bring the charge time to under 30 minutes.

Make the electrification connection and join us at the NEC on 23rd March.

Cool guy says...

Look behind for experience
Look ahead for learning

MEET THE TEAM
