

FOR COOLING OUT LOUD

Electrical surging ahead

As EV sales continue on an upward trend, with the SMMT reporting that double the number of vehicles were sold in 2021 than in the whole of the last decade, SPAL's focus is firmly on battery thermal management.

Manufacturers are working on ever faster charging times which generates a lot of additional heat and SPAL's range of brushless fans are specifically equipped to deliver the precise efficient cooling demanded by the battery in the car and the charging point. SPAL will be out and about at the London EV Show (new date 14-16 December) to immerse itself in the global EV sector, network with industry trailblazers and examine the latest products, services and innovations.

Plans are also being finalised for a presence at the Energy Efficient Motorsport Conference hosted by the Motorsport Industry Association on 12th January 2022.

Inside SPAL's Warehouse

What a lot of fans and blowers! Take a drone tour down the aisles of the SPAL UK warehouse and admire the orderly racking brimming with products ready for picking and despatch to customers. Something tells us we need more space.

Watch it here...

Cool guy says...

Sometimes to go
faster you must
dial down the heat
